

## **R&D LAB MANAGER**

**Jinwei** (<http://www.jinweibio.com/en/>) is a biotechnology company working in partnership with Theravectys – France, a spin-off of Pasteur institute. Our platform is based on a state-of art patented Lentiviral vector technology.

Jinwei's goal is to develop customized lentiviral vectors services to meet the requirements of an increasingly demanding healthcare market. As a biotechnology company, we develop non-CAR-T based therapeutic vaccines for patients suffering from cancer and other major infectious diseases. We also deliver safe and reliable viral vector system for CAR-T cell therapy application as a contract manufacturer.

Jinwei's ambition is to have a highly engaged scientific team with top scientists who are inspired to take project ownership and further develop themselves in one of the most rapidly growing scientific fields.

The R&D Lab Manager will be based in Shanghai ZhangJiang Hi-Tech Park. The manager of R&D Lab will lead implementation of GLP and lead a small group of scientists and technicians to implement the protocols for proof of the concept in new indications and to ensure good quality of experiments through collaborations with third party service providers.

### **Key responsibilities include but are not limited to:**

- Establish GLP in the Lab and ensure the activities GLP's procedures and policies are followed in lab activities.
- Participate in developing the protocols with PIs or external scientific consultant for proof of the concept in new indications to ensure quality of design of experiments and its executability.
- Lead implementation of protocols, ensure quality of execution and deliver the results according to timeline.
- Manage integrity and safety of R&D data generated from experiments.
- Be responsible in protecting sensitive materials and IPs.
- Ensure right skills and knowledge are acquired for lab staff and necessary training is in place

### **Experience & Education:**

- Master Degree or Ph.D in Biotechnology or a Life Sciences discipline such as immunology, Biology.
- 10+ years in running experiments in assessing efficacy of biopharma from animal studies
- 3+ years in lab management position
- Experience in GLP implementation and compliance for drug development project.
- Rich experience in running experiments in assessing efficacy of biopharma from animal studies, familiar with immunology, molecular biology.
- Hands on experiments in handling virus packaging, PCR, FACS, ELISA and ELISPOT, management experiences in development lab of pharmaceutical company,
- Fluent in English

### **Salary and Other Benefits:**

- Gross Salary after taxes: EURO 80~100K depends on experiences and competencies
- Other Benefits:
  - Allowance for leasing apartment
  - Medical Insurance
  - Travels (China / Europe)
